Embedding Evidence Into Practice
Case Study 2

Who:

Consultant Anaesthetist.

Research request:

Research support to help support decisions about treating a rare case of a pregnant patient with complex regional pain syndrome (CRPS).

What we did:

Discussed evidence requirements.

Carried out comprehensive literature searches and emailed relevant references.

Benefit and impact:

Saved valuable consultant time.

Decisions about safe patient care are evidence based.

Patient reassured that treatment is current practice.
